

From Old to New!

## The ENGEL Scrapping Premium

**Schwertberg/Austria – March 2009.** In times like these in particular, a machine's economy and energy efficiency play an extremely important role. Old machines that have seen many years of service can quickly become "energy hogs". And new investments typically pay their way in a very short time. For this reason, ENGEL is now offering a scrapping premium of 3,010 Euros! The "From Old to New" offer applies to the ENGEL victory, e-victory, e-max, e-motion and duo pico models and is available until July 31st 2009.

Due to the current economic situation, many companies have introduced cost cutting measures, and the roadmap envisages "savings". Despite this, one shouldn't ignore the auxiliary costs incurred by machines that have been in service for many years. The development of energy efficient models, and the power savings they offer, make new machines the vastly superior business option in the long term. To make it easy for injection moulders to take the decision to buy a new machine, ENGEL is now offering a scrapping premium.

### **How it works**

Injection moulders who replace an old injection moulding machine with a new, state-of-art ENGEL machine will receive a scrapping premium in the amount of 3,010 Euros. In other words, the premium is credited to the customer's account on providing proof of scrapping an equivalent machine by any manufacturer, or of passing the machine on to a used equipment dealer. You will not only save money on your investment, but in the long term, too, thanks to the new machine.

Remember, ENGEL injection moulding machines not only offer you maximum efficiency and precision, but set new standards with respect to energy efficiency. The premium offer applies to the ENGEL victory, e-victory, e-max, e-motion and duo pico models and is available until July 31st 2009. The ENGEL scrapping premium is available for machines scrapped worldwide and in Europe also for machines sold as used equipment.

#### **ENGEL AUSTRIA GmbH**

The ENGEL brand denotes the world's biggest manufacturer of injection moulding machines and, at the same time, one of the world's leading plastics processing machine manufacturers. Today, the ENGEL Group offers a full range of technology modules for plastics processing as a single source supplier: Injection moulding machines for thermoplastics and elastomers, and automation, with the assurance that individual components are also competitive and successful in the world markets. With eight production plants in Europe, North America and Asia (China, Korea), subsidiaries and representatives in over 85 countries, ENGEL offers its customers the optimal global support they need to compete and succeed with new technologies and leading-edge production systems.
